## 1 Understanding the Two Rules of Probability

1. Consider a *fair coin* where the probability of a heads,  $P(H)$ , is 0.5, and the probability of a tails,  $P(T)$ , is 0.5 as well. What is the probability of the following sequence: HHTTHHTT?
2. What is the probability of flipping a HTT OR a THH?
3. What is the probability of flipping a HT, AND then a TH?
4. What is the probability of flipping a HT AND a TH, OR a TTH AND a HTT?
